

Session 20.

Resolving the “Parking Lot”: Final Technical Q&A

(0:30)

Objective

Conclude the “core technical skills and knowledge” portion of the workshop by resolving parking lot issues.

Format:

Facilitated discussion

Summary

Over the course of 4 days, we have identified a number of “parking lot” items—questions and issues that could not easily be addressed at the time they arose, but which are important to answer and resolve before the end of the workshop. Additional issues may have been raised by last session’s environmental compliance/ESDM knowledge game.

We will conclude the “core technical skills and knowledge” portion of the workshop by discussing—and hopefully resolving—these parking lot issues in a facilitated discussion that draws on assembled expertise of the BEOs, REAs, the consultant trainers, and participants.

Note that parking lot issues concerning mission and team compliance processes will be reserved for the coming plenary “way forward” discussion.

Key Resource

“Parking lot” issues list compiled during the workshop
